Problem

[2-3 sentence problem statement. Describe the pain point, who it affected, and why solving it mattered. Keep this tight – it sets up the Approach and Result sections below.]

Approach

- [Bullet describing a key design/technical decision and why you made it.]
- [Bullet describing an implementation detail, architecture choice, or tool integration.]
- [Bullet describing how you validated, tested, or iterated on the solution.]
- [Optional fourth bullet – collaboration, constraints, or trade-offs handled.]

Result

[Headline outcome, quantified where possible – e.g. “Reduced page load time by 40% and onboarded 500+ users in the first month.”]

[Optional second sentence with a secondary metric or qualitative impact.]
